## DETAILED ACTION

### *Election/Restrictions*

Claims 1 – 8, and 12 – 20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected coated fiber, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on April 6, 2007.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claim 9 – 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Maroney et al. (U.S. Patent # 6,628,871 B2).
2. Regarding claim 9, Maroney et al. teaches a light transmitting method wherein a fiber fuse propagation threshold which is a minimal light output required for fiber fuse propagation is obtained and a transmitted light output is controlled so that the transmitted light output becomes smaller than the fiber fuse propagation threshold (col. 3, lines 11 – 28).

Art Unit: 2874

3. Regarding claim 10, Maroney et al. teaches an optical amplifier controlling method comprising the steps of: monitoring a branched small amount of output light from an optical amplifier (col. 5, line 34, col. 6, lines 21 – 25); comparing a monitored value with a preset fiber fuse propagation threshold (col. 3, lines 17 – 19, col. 6, lines 17 – 22); and when the monitored value is smaller than the fiber fuse propagation threshold, providing instructions to maintain or increase the output light of the optical amplifier and when the monitored value is equal to or larger than the fiber fuse propagation threshold, providing instructions to reduce the output light of the optical amplifier (col. 3, lines 20 – 50). Inherently, since the comparator is connected to a threshold generator for monitoring the optical power level, the optical power level has the ability to rise to the threshold level.

4. Regarding claim 11, Maroney et al. teaches wherein reducing of the output light of the optical amplifier is performed by reducing a light output of every wavelength of wavelength-division-multiplexed light by a small amount (col. 5, lines 47 – 61, col. 6, 30 – 32). Where the term signals represents WDM signals also as recited in the specification.
